## **DETAILED ACTION**

### **Status Of the Claims**

Claims 1-3 are currently under Examination.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1-3, the definition of variable group R1 is unclear and ambiguous because the meaning of the phrase "an alkyl group of 1 to 10 carbon atoms which may contain a halogen, hydroxyl group, ether bond, carbonyl group, carboxyl group or cyano". It is unclear when the said alkyl group may or may not have one or more of the given substituents. Is Applicant's intention is to define the said group as one "optionally substituted" wherein the possible substituents are selected from the halogen, etc? Moreover, it is unclear what is a "ether bond", listed as one of the possible substituents. Is Applicant intention to incorporate an ether functionality as part of the said "alkyl" group? Clarification is requested.

### **Allowable Subject Matter**

No prior art disclosing or suggesting alicyclic derivatives described by claims 1, 2 and 3 were found in the prior art of record. The closest art relevant to the instant derivatives

Art Unit: 1625

was found in:

Choi, US 6080524 and Choi et al, US patent 6287747. Choi and Choi et al, disclose symmetrical alicyclic acrylate derivatives. Nonetheless, the said derivatives are considerable different to the ones described by Applicants because the Variable R1 is not an alkyl group and Choi references do not teach lactone derivatives.
